Title: Application Development Supervisor

Unit: Supervisory and Professional

DEFINITION

Under the direction of the Manager, Application Development, or assigned manager, perform a wide variety of highly specialized technical and supervisory tasks to support the design, development, analysis, testing, modification, installation, and maintenance of various application development and maintenance efforts within the Information Technology (IT) department. Work in accordance to client approved requirements and detailed specifications; apply judgment in devising program logic and selecting and adapting standard programming procedures; obtain advice when precedents are unclear or unavailable; maintain department programming and naming standards.

DISTINGUISHING CHARACTERISTICS

Primary duties in this classification include oversight and assignment of Programmer Analyst daily activities. This position supervises, acts as lead for, and coordinates projects and work teams.

EXAMPLE OF DUTIES

1. Provide leadership and coordination of daily task assignments within the Programmer Analyst team(s), evaluate and document performance, and recommend disciplinary action when necessary, review staff work for accuracy and timely completion of assigned duties. Train staff in new and existing procedures; develop work schedules.
2. Coordinate application development and maintenance activities between Programmer Analysts and various IT and District departments.
3. Provide leadership in IT troubleshooting efforts; establish group troubleshooting sessions as needed to avoid or alleviate interruption of IT services.
4. Work with manager to develop standards, process and procedures related to application development.
5. Provide management with recommendations on strategic direction and/or process improvement opportunities.
6. Develop, modify, and maintain assigned programs; debug and correct programming logic and syntax errors; Review user requirements and needs for program enhancements and perform analysis, design, implementation, installation, and training related to new software enhancements.
 - a. Analyze and plan systems based on consultations with manager, other IT staff, and end-user departments.
 - b. Document system plan and establish an implementation schedule.
 - c. Design and document systems based on analysis results and further consultation with manager and coworkers.
 - d. Develop data structures, program, and procedures necessary to integrate and/or implement the system. Test system fully to determine its operational reliability.
 - e. Document system according to IT department standards.
 - f. Assist user and operating areas in implementing and supporting system, including system installation, training, and troubleshooting.

7. Provide technical advice and support to user departments; create ad-hoc reports; perform data analysis and problem solving.
8. Coordinate programming changes with manager, production control staff, technical services staff, and end-user departments according to business schedules and department procedures and standards.
9. Perform related duties as assigned.
