San Diego Community College District
San Diego Miramar College Website Redesign

Request for Proposal (RFP) #20-03

ADDENDUM NO. 1
October 22, 2019

CERTIFICATION OF RECEIPT OF ADDENDUM

I certify that I have received this addendum on behalf of the company listed below.

Signed: ___________________________________________  Dated: __________________________

Name and Title: _______________________________________________________________________

Company: __________________________________________________________________________

Page 1 of 14
ADDENDUM NO. 1
TO RFP #20-03

1.0 This addendum is considered to be part of the Request for Proposal (RFP). All other terms of the RFP remain unchanged and in effect. This addendum is intended to provide additional information and/or to change requirements in the above referenced RFP. Any information contained herein will be considered part of the RFP and as such will be used in the evaluation of the responses.

2.0 To verify that all Vendors have received a copy of this addendum, please sign the cover page of this addendum and return it with your proposal to:

San Diego Community College District
Purchasing & Contract Services
Attn: Kelly Rosas, RFP #20-03
3375 Camino del Rio South, Suite 270
San Diego, CA  92108

3.0 The information in this addendum is primarily the result of Question and Answer period that closed on October 18, 2019.

4.1 Do you have a budget or budget range you can share for this work?
*The budget has been determined based on grant funding available.*

4.2 What third-party integrations should we anticipate for the development of the site?
*Various community modules as needed, SQL Server, Outlook or Outlook calendar files, possibly PeopleSoft queries.*

4.3 What is the impetus for the redesign?
*The San Diego/Imperial Counties Community College Regional Consortium conducted an analysis of regional community college websites and recommended that San Diego Miramar College update its website in accordance with the student experience as defined in the Guided Pathways framework.*

4.4 Do you have a preference for a local agency?
*No, all suppliers are welcome to participate.*

4.6 Have you conducted any relevant research prior to this project?
*Yes, and RFI was distributed recently seeking information for this project.*

4.7 Do you have a website governance plan in place today or would that be potentially part of this project as well?
*The governance would not be part of this project aside from any recommended best practices.*

4.8 The RFP states that the redesigned site is to include "An automated process for content editorial guides". Can you provide more detail as to the desired functionality required?
*The thought is to adopt coding/commenting styles and appropriate tools (such as DoxyGen) that would help keep a style-guide current and correct.*
4.9 What 3rd party integrations are in place on the current site? The RFP states that Google Analytics + Active Directory integration is currently in place, but it would be helpful to know of any other pre-existing integrations.

*AD integration is not in place, we would like to support AD authentication for content authors to log-in.*

4.10 Which database back-end does the site currently use?

*MySQL (LAMP)*

4.11 How is the site currently being maintained and supported (internal team, external agency, combination of both)?

*Internal team*

4.12 What languages are you planning to have the site available in?

*English, but all design work should keep in mind that we may want future multi-language support.*

4.13 Is there an alternative for hard copy submission of our response?

*Per the RFP document, responses must be submitted in hard copy format.*

4.14 Is there any plan for user acceptance testing at any point during the build process? (Post information architecture definition, later into execution phase, or as part of the end Quality Assurance phase?)

*The thought is continuously during design, but we will look to vendor expertise in this area.*

4.15 Pages/Nodes: During the RFI process, you mentioned that the site contains 17,000 nodes and 2,600 displayed pages. Is this due to the quantity of unpublished content? Is there another reason for the discrepancy?

*Many of the nodes on our system are data nodes; i.e., they are not intended to be displayed as-is, but incorporated in a view. In addition, our hardcopy documents are each contained in a node; this makes it easier for our editors to upload and find their documents.*

4.16 What design/brand assets would the chosen vendor be starting with? (ex: brand book, style guide, sample assets etc.?)

*Our small digital media library, the style-guide as it currently exists.*

4.17 Are you looking for any brand elevation?

*Not as part of this project, other than ensuring Analytics are properly integrated and basic steps are taken to ensure content pages can be created with the proper tags/metadata for SEO.*

4.18 Do you have, or are you able to share current personas you are working from?

*Prospective students, current students, industry partners, counselors (internally as well as from other K-16 institutions). Student personas include graduating high school seniors, part-time students who are employed, students returning to higher education after a hiatus, and students looking to improve their skills or earn a promotion. Internal customers such faculty and staff seeking work-related information are also a priority.*
4.19 Have you identified what content/formats your audiences prefer as they move through their journey? *Mobile is the most common format.*

4.20 Are there hosting requirements? Given that you will be internally hosting, it would be great to get more info on your environment: Do you have any information about how deployments are handled? Are there any CI (continuous integration) or CD (continuous delivery) tools in place? No hosting requirement, we host internally. We use Git/Composer to move from development to production. *We are open to suggestions for best practices & tools, but the funding is primarily for website redesign, not CI/CD process improvement.*

4.21 Can you provide some more clarity on your internal development resources? What roles do they want to play in this process? The RFP mentions that migrations would be handled internally. What else will the internal resources be responsible for? *We have a single web-developer who will work with your team, ideally any required coding/theming starts on his plate first, with your team providing additional man-hours as needed and technical support during development.*

4.22 Do you see this as a fresh start, re-install of Drupal 8? Or, is the plan to use the current site as a foundation for the redesign and new functionality? *Most likely, a fresh start.*

4.23 The initial RFP mentioned, “We will need to pull data from various sources, which are beyond the scope of the college. They include PeopleSoft, SQL Databases, or even CSV files. For instance, a current course list, so we can display actual, current courses, for various programs on our site.” Do you have any further specifications or detail that you can supply? *Ideally, we would be able to access PeopleSoft queries, but this may not be feasible in our timeframe. More likely, we will receive data-dumps (flat-file CSVs) that will be imported into a SQL server and the website will need to access that.*

4.24 Custom Modules: please provide a high-level overview of the functionality that the custom modules provide. *We primarily use community modules. The most complex custom module we have is an “Emergency” module, which is responsible for checking an external resource for the presence of an emergency message, which is then injected onto our site, on every page. Other small custom modules are: A module that generates certain theme-independent blocks and provides workhorse functions such as IP and content type detection. Modules that provide an automatic title and date formatting for certain content types. Modules that make changes to the node forms for certain content types.*

4.25 Do you have any other integration needs that you have yet to identify? For example, I do not see any marketing automation or customer relationship management (CRM) system that are currently integrated with your current website.
We have no integrations with marketing, CRM or student databases planned; other integrations are specified in other questions.

4.25 Regarding search, will we be indexing any other sites or data/content sources outside of the SDMiramar.edu domain?
*It would be useful to index a few external sites, such as the District pages (sdccd.edu).*

4.27 What level of Accessibility needs do you have?
*To the extent possible, WCAG 2.1.*

4.28 Whether we need to come over there for meetings?
*Yes, some on site meetings may be required.*

4.29 Can we perform the tasks (related to RFP) outside USA? (like, from India or Canada).
*Yes, if that is conducive to the suppliers abilities.*

4.30 Can we submit the proposals via email?
*No, per the RFP, all submittals must be hard copy.*

4.31 Will firms without experience in Guided Pathways would be considered?
*Information on Guided Pathways (GP) is available on the state chancellor’s office, and we request that vendors be familiar with the initiative, and familiarize themselves with other California community college sites who have implemented GP, however direct experience is not required.*

4.32 Will our offshore team members and sub-contractors be permitted to participate in this project?
*Yes*

4.33 What is the expected delivery date of the final product?
*Per the RFP, September, 2020.*

4.34 How much of a factor is location? Will you accept firms who are not in the same city/state?
*Yes*

4.36 Do you currently have an incumbent agency providing these requirements? If so, who?
*No incumbent*

4.37 Is this bid open to any respondent, or have you only sent it to a pre-qualified list?
*This RFP is open to all suppliers interested.*

4.38 How many responses are you expecting?
*We are unsure of a number.*

4.39 Is the reason for this RFP because your current RFP is expiring, or are you looking for a new partner to deliver the requirements?
*We have no current partner*
4.40 Are you open to a conversation / phone call / meeting with us before the RFP is due? We find that this helps relieve a lot of the uncertainty that RFPs tend to induce. 

*No, all questions must be handled transparently through the Q & A period.*

4.41 Do you need post-launch technical, content, design or strategic support? If so, for how long? 

*No*

4.42 Are there any microsites or subdomains to be included in the scope? 

*No*

4.43 What types of users will need to login to the site (content managers, editors, admins, etc.)? 

*Yes – editors, publishers. We do not have any “customer” or student login requirements.*

4.44 Please confirm whether the RFP is to be awarded to a single provider, or whether multiple providers will be awarded the contract? 

*A single provider will be awarded this project.*

4.45 How many visitors and unique page views does your site get each day? 

*One week: 55K page views/43K Unique* 

4.46 You mention document storage and versioning in the RFP. Are you looking to turn Drupal CMS into a document storage solution? Please clarify the need and priority. 

*We are not looking for Drupal to be a DSS, aside from ensuring that links don’t change when documents are updated. Currently, we struggle with document links changing when, for instance, a basic form changes and the new version is uploaded, the URL changes, which breaks links.*

4.47 You mention Google Analytics in the RFP. Do you require a measurement strategy? Do you require some configuration as well? What about ongoing analytics services. Please clarify. 

*Vendor assistance with best practices; we are not highly experienced with GA.*

4.48 You mention looking for a calendar solution. Is this correct? Is this something the awarded firm will be responsible for? What solutions have you researched and what are some options you’re considering? Please clarify. 

*We are not looking for a custom calendar, but we are looking to improve our current calendar solution.*

4.49 Will the awarded firm be responsible for front end development of templates? Have you determined how many templates you might need? 

*Yes, this is an expected part of the project, however our web developer will be working with your team on the development/coding.*

4.50 Will the awarded firm be responsible for integration of templates into Drupal and build out structure of the site? 

*Yes, as per #4.49*

4.51 Will the awarded firm be responsible for any 3rd party integrations? If so, please list all that are confirmed for this project. What level of functionality will be required for each? Please clarify.
3rd party integration will either be common in nature, (e.g., social media) and reasonably expected in a modern website, including custom SQL databases (apart from the MySQL Drupal database), or somewhat more involved. For instance, some integration with a 3rd party forms vendor or event manager (e.g., Eventbright). We would expect vendor to have experience/ability to interface with common 3rd parties using published API’s.

4.52 Will you need copywriting services for top level pages? Please clarify.
No

4.53 Do you require a content strategy for critical high level site pages? Please clarify.
We currently have a content strategy for critical high level site pages. Whether the current content strategy should be adjusted in order to meet the goals of this project is to be determined.

4.54 Will the awarded firm be responsible for content migration. If so, how many pages are you expecting to be migrated over?
No, though we may have some minor questions as to best practices.

4.55 What type of training will you require? How many people will need to be trained? We also do unique training like “Writing for the Web”
End-user training is not a part of this project – it will be handled in-house.

4.56 Ideally, what would you like from a partner? What things are most important to you?
Experience with structuring data & processes to avoid side-effects (e.g., not creating processes & data-types that result in changed URL’s for minor edits), an understanding that the end-result of the project is not merely pretty pages, but a proper organization of information so users can find what they need, an understanding that content authors want the ability to create compelling content, beyond what the basic D8 editing interface provides, experience creating sites that work well with many departments editing content independently, but may still need to refer to other department content, and an understanding that all development happens with our web-developer who will need a full and complete understanding of all the code & structures in order to take over 100% upon project completion.

4.57 As part of the current design strategy, do you have an existing style guide/Brand Strategy?
Yes. All logos, images, slug lines, and the design of the footer are approved through our Public Information Officer’s office. We have been assembling a style guide as we go. It is incomplete and we would appreciate any best practices, automation strategies, etc.

4.58 Will there be separate Run and Maintain Budget invocation for the Ongoing support and Post Production Maintenance Phase? If yes, what would be the range for the same?
No, the system will be maintained and hosted internally.

4.59 What is the minimum standard of infrastructural requirements/system requirement in terms of business user related systems (Laptops/handhelds/mobility) present in the organization today?
Standard systems are approximately 3-6 years old, on average utilizing a DQ67 or higher chipset, with 4-8GB RAM, current standards call for 16G RAM, SSD drives, DQ270 chipsets.
4.60 How many UAT testers will be involved in the testing phase? Should it be similar to the head count mentioned in the RFP section for User Groups?

_The last time, we opened the new website for beta testing by our stakeholders. Number of testers was dependent on those you wished to participate. The most likely scenario would be about 15 to 48 users per session, if group UAT is planned._

4.61 Which project implementation strategy/approach would you prefer? Is the organization comfortable with Watterfall, Spiral, Iterative, or Agile methodology for delivery? Please choose one?

_We would expect vendor guidance on this subject._

4.62 Other than accessibility requirements, does the solution require and SOX/GDPR compliance for the American/EU region Data Privacy/Protection?

_Other than Miramar Campus’s and the District’s privacy policy, we currently have no formalized requirements._

4.63 Is 99.8% Availability with a Return to Operation of 6 Hours good for the Miramar College website Solution?

_We can currently restore, from a total failure, faster than this. The new system should continue to function with our current processes. Since we are not asking for hosting or ongoing maintenance, these problems would be handled in house._

4.64 Should the new proposed CMS solution hold more than 3-year old archival data for the website? Is there a requirement for archival data after a designated time to be made available for purging?

_Committee agendas/minutes must be archived for three years. Other than that, we do little archiving. System should support full archiving via enforcing relative links, etc., so that after a major upgrade, the system can be moved to an archival URL._

4.65 Is there any specific go-live date mentioned as per the RFP in line with the proposed start date of the project i.e. January 2020? We would also like to know after the contracts and procurement agreement is signed off, when can the actual requirements gathering happen with the stakeholders?

_September, 2020 is our outside go live date. We can begin to schedule stakeholder meetings very quickly once the project is awarded._

4.66 How many business/end users will be using this CMS application? This information is required for the Load test to be done after the final build and pre go-live.

_Miramar College has roughly 12,000 fulltime and part-time students, all of who will presumably use the website at least sometimes. We have about 500 employees, about 60 of whom are content editors who log onto the website regularly._

4.67 Is there any payment gateway service partner you are using currently for your donations module?

_There is no dedicated module for donations; it is a straight link to PayPal. All student registrations and fees are handled via a different business unit with the District so only the payments on our side handles are occasional Foundation donations._
4.68 What bug/defect tracking tool do you currently use as part of your BAU?
Currently none, as time permits, we have been experimenting with various (free) visual regression tools.

4.69 Which applications does the current Miramar College solution talk to? Can you provide a list or application/interfaces the new CMS solution will require integration with? Also please do highlight in the integration landscape/list on which all application had Inbound/Outbound connections with the proposed CMS solution?
The website currently communicates with the District’s emergency system. This is the placement of a simple text file on our website as determined by the District. The new website will ideally communicate with:
Active Directory for single sign-on
SQL Server (Separate from the MySQL Drupal DB)
Solr or another search server
The District’s proprietary data system
Google Analytics
Possibly a calendar on a different Drupal site (or a non-Drupal app)

4.70 Do you prefer Face-to-Face requirements gathering/scoping/timeline discussions or remote sessions?
Some on-site is preferred.

4.71 Can travel costs for Face-to-Face training and requirements gathering workshops be included as part of the proposal.
Yes, we would expect the respondents to include a detailed list of possible travel costs that will be associated with the website redesign. After the fact travel and reimbursements will not be allowed.

4.72 Was there any Performance test/Performance engineering done for the existing solution? Is there any specific Performance Test requirements for the proposed new CMS solution?
None at this time.

4.73 What are the current support tiers available with the existing CMS/bespoke solution with your implementation partner/IT organization?
Our Instructional Computing Supervisor and our Web Developer.

4.74 What was the level of customization done as a part of the existing solution?
Content types, theme, custom module for emergency messages. Other modules are community modules. And customizations to community modules (if necessary) should be incorporated back into the community repositories.

4.75 Is there any particular range in terms of commercials you have in mind for the end to end delivery of this project?
The question is not understood.

4.76 Is your self-hosted website codebase currently managed via Git?
Yes
4.77 Does your self-hosted environment have Dev and/or Staging environments?
   Yes

4.78 How does the SDCCD Emergency Messaging system get pushed from OU? Does your current site have this integration in place?
   *If there is text at a particular URL, that is the message. The absence of text means no emergency.*

4.79 Is Miramar College definitely going to utilize Lingotek for its multilingual functionality?
   *Lingotek was only mentioned as an example. The intent is that multi-language support be kept in mind during the development so that at some future date, if desired, there would be no artificial barriers to providing multi-language.*

4.80 Drupal has the ability to communicate with external data sources almost by default. Is there a specific data source in mind with the discussion of secondary data sources in the RFP? Courses were mentioned specifically, but it is unclear what else should be considered in the project scope.
   *Most likely we will have a SQL database continuing course information, which will need to be displayed within the website. Additionally, there will be the common social media integrations, PayPal, possibly SARS Grid.*

4.81 Does Miramar currently utilize the Media module to manage its documents? Files are typically managed as in Drupal 8 as a best practice and we would be working within that core modules functionality for file management.
   *We would look to the vendor’s expertise in these areas. We do need to enhance our current document management process. Currently, documents are custom type.*

4.82 Is the Campus Directory viewable at https://www.sdmiramar.edu/directory/people currently populated with data from an external source? If so, how is it currently ingested? Would Miramar be looking to enhance this site feature?
   *Human Resources data is housed in PeopleSoft, and we have no direct ODBC-style access to these data sources. The most likely automated method would be via daily CSV files. Currently, the directory is maintained by hand.*

4.83 What are the biggest pain points for your site editors?
   *The default back-end content editing interface is very poor and does not allow for much in the way of design capability. We would like an enhanced back-end content editing experience that is flexible enough to allow for content authors to create attractive content both in-template and perhaps, with proper permissions even out-of template pages. Document management is another pain point, as in enforcing relative URL’s for internal content (the users don’t notice that pain until we archive the site to a different URL).*

4.84 Any pages on the Miramar College site managed using the Paragraphs module or Drupal core’s Layout Builder?
   *We currently offer the option for our content editors to use Paragraphs if they choose. Many pages and taxonomy terms use this option, mostly for two-column layouts. While editors appreciate the added flexibility of layout, many would like for Paragraphs to be more user friendly.*
4.85 What are your current pain points with the Campus Calendar at https://www.sdmiramar.edu/calendar?

While our current calendar works and is liked by the campus, it has the following problems which MUST be addressed:

Unstable due to the use of multiple patches as well as added JavaScript for formatting, time zones, Views integration, etc.

Because of the large number of patches, many of which are not maintained, updating Drupal core breaks the calendar. Therefore, we are locked in to 8.5 until a new solution can be found. The importing-exporting of calendar items for individual editors is cumbersome and not used.

4.86 Are some of your events currently imported from an external source such as Eventbrite? The RFP mentions “the ability to integrate with” event management platforms, but it is unclear if there is a specific integration in mind for which we would have to estimate costs.

We would rely on the vendor’s expertise for event management suggestions, integration with Eventbrite is a suggestion of a possible solution but we are unfamiliar with the varied possibilities or even which vendors provide a suitable API. We would like the ability to import from Outlook, either via calendar files or a more automated integration with a master campus calendar (or calendars).

4.87 Can you explain in more detail “the ability to utilize a third-party calendar?” Does that mean the ability to embed a third-party calendar, or this a request for an ability to migrate/import events from that third-party data source?

From our experience, calendar modules are complex products and they have restricted our ability to apply various security/core updates. We need a campus calendar feature on the website, which may or may not be integrated. One possibility would be a second Drupal site for the calendar, but the main site needs to be able to access/display a calendar from the second site.

4.88 Do you have a third-party calendar in mind, or are you looking for a recommendation from the vendor? Should cost be a factor in any recommendation we make?

We would rely on vendor expertise.

4.89 Would your team be open to third-party site search providers (e.g. Cludo)? Or would you be looking to enhance searches using Search API and Solr?

We are open to suggestions, however we will not be able to utilize any subscription-based services and prefer no-cost open-source solutions.

4.90 Would your team be open to third-party form creation software? If not, the only method for encryption of Webform data would be to utilize something like https://www.drupal.org/project/webform_encrypt. It is unclear if this would satisfy your forms solution requirement.

The website will not be handling personal data beyond perhaps names and emails, but we would like to protect the data as some student may enter PII inadvertently. We are open to third-party solutions or suggestions.
4.91 You say that the new site needs to have a “student focused presentation.” Has there been any user research done with students to learn about their pain points using the website? If so, what have you learned?
*No formal research. Anecdotal pain points are “finding things” and mobile presentation.*

4.92 Enrollment is a top priority for many college and university sites. We also understand that the Miramar College website uses a third party application system shared by schools within SDCCD which currently makes collecting application information difficult. How are you measuring success on your website and what KPIs do you envision for the new site?
*We struggle with this ourselves. Once off our site, we lose the data. We would like some polling functionality to randomly assess user experience, and the conversion we can track revolve around things like counselor appointments.*

4.93 With respect to your editors, what are the pain points on the current website?
*The basic D8 editing interface is very plain, and users can only create very basic content. We need a better way for users to integrate images, video, other components and control layouts so they can create compelling pages.*

4.94 Who are the decision makers for this website design project?
*Campus and District representation will be the decision makers.*

4.95 What are the scoring metrics you’re using to rate the proposals you receive?
*The scoring metrics are included within the RFP.*

4.96 Who are the people who will be on the core website team?
*The core website team contacts will be provided upon award.*

4.97 How much of their time will be dedicated to this project?
*The campus web developer will be dedicated approximately 80% of the time to this project, and the ICS supervisor will be heavily involved as well.*

4.98 What skills will they bring to this project? (i.e. development, copywriting, project management...etc.)
*The web developer has been working with Drupal 8 for over two years, and brings coding/theming/views/etc. experience.*

4.99 You mention that the new site must launch in September 2020. Why is that date significant? In other words, what happens if the website does not launch by then?
*Internal processes are dictating the date. The website will need to be live by the date listed within the RFP.*

4.100 According to the RFP, the payment terms on the contract are for a fixed price. We are a time and materials agency. Is SDCCD open to a time and materials engagement?
*No; per the RFP, the agreement will be written for a fixed price agreement.*

4.101 You mention that the live site is self-hosted. Will Miramar provide development and staging servers as well?
*Yes*
4.102 Will the in-house designer be responsible for the entire design of the website, based on our collaborative feedback, or are we to do any hands on designing as well? Will we be required to draft up wireframes or prototypes as a preliminary means of guiding the eventual design creative?

*Vendor will be providing hands-on code/design as well. Vendor will be primarily responsible for wireframe, prototype and preliminary creative design.*

4.103 PG14 “looking for the vendor to provide development and implementation.” and “The Offeror awarded a contract resulting from this Request for Proposal will be working closely with Miramar’s web designer, who is the project lead and will be responsible for the redesigned website. All design, changes, site mapping, internal and external workings, etc. associated with the website is to be documented and provided to the Miramar web designer in sufficient detail for training purposes and future updates. “

Q: Is Miramar’s project lead/web designer responsible for creating the new website design? Or are you looking for the vendor to provide services for discovery, strategy, Information architecture, and user interface design as well?

*Vendor to provide services for discovery, strategy, Information architecture, and user interface design as well? Campus web-designer will be fully working with your team when it comes to coding and theming approved designs.*

4.104 Q: If Miramar’s project lead/web designer will be responsible for the design work, how far along is that work? Will designs be complete by the time this project is awarded?

*Design work is primarily vendor’s responsibility.*

4.105 PG 14 “There may be a need for migration assistance in redistributing content. The campus will provide a dedicated point of contact for this project. “

Q: What are their content goals for the redesign?

*Migration assistance may be needed if there are some technically challenging migrations to do; as we are currently Drupal 8, we do not expect major issues in migration so vendor role in migration is likely to be just some occasional technical support. Goal is less about content (we provide content) and more about information organization, UX, ease of finding the more obscure content, and ensuring students are equipped with the information and tools to succeed.*

4.106 Q: Are you looking for a vendor to provide content strategy services and content development consultation? Or should we consider this to be a 1:1 content port, aside from changes that will be necessary to map to a new IA?

*Not looking for content strategy as other than recommendations as needed according to best practices.*

4.107 Q: The RFI mentioned scripting and/or manual content migration, but neither is mentioned directly in the RFP. Are you expecting the vendor to migrate content into the new site? Or will Miramar be taking that on?

*Primarily Miramar*
4.108 PG 10 mentions “internal user testing” as part of the Development phase.
Q: Do you mean user acceptance testing of the site prior to launch by an internal stakeholder group?
Yes, though we envision testing to occur during development phases as well.

4.109 Q: The RFP makes mention of a few integrations and items that may imply you’re also wanting an intranet or portal of sorts as part of this effort. Is that accurate or are the below listed items related to pulling data/content into the public facing site and allowing site users to seamlessly link off to other 3rd party tools?
Pulling data/content into the public facing site and allowing site users to seamlessly link off to other 3rd party tools.

4.110 Q: “The current website has multiple active directories; users will be allowed to authenticate with their AD credentials; this is to remain unchanged” “The ability to communicate with secondary data sources (e.g., SQL Server, PeopleSoft, CSV files) for access to course, program, and other data. An example, a current course list may need to be pulled into the website, so it is displayed as current courses for various programs on our site.” “A file management process that enables content authors to access, upload, and organize documents.”
Q: If you are looking for a public site and intranet/portal are you open to separating the two into 2 launch phases?
This section is in error; the DISTRICT has separate active directories. The website currently does not authenticate via AD. We would like for faculty/staff to be able to authenticate and edit their content using their own AD credentials. We are not looking for an intranet/internet system, this project is solely for the public facing website.
