Introduction

Given the importance and emphasis on transfer, this report provides an examination of student transfer patterns from three different perspectives: transfer volume, transfer rate, and transfer prepared rate. **Transfer rate** tracks a cohort of students with similar qualities that characterize a particular transfer behavior over a specified period of time. **Transfer volume** is the sheer count of transfer students who have transferred from community college to a 4-year institution. Unlike transfer rate, volume does not involve tracking of a cohort of students. Transfer rate provides information that is time-restricted which could be very useful for informing decisions regarding curriculum, course offerings, and scheduling. Transfer volume on the other hand, identifies the overall number of transfers which may be valuable information when used in tandem with enrollment trends to determine whether or not there are equitable support services among segments in the population. Students who don't transfer or obtain an associate degree, but reach **transfer prepared** status are also counted. To achieve transfer prepared status, a student must successfully complete 60 UC/CSU transferable units with a GPA greater than or equal to 2.0. Much of the good work that colleges do in the area of transfer that affects transfer prepared students can be found in some statewide reports (e.g., Student Success Scorecard).

This report includes overall transfer volume, transfer rate, and transfer prepared figures for all colleges in the San Diego Community College District, as well as by each individual college (City/ECC, Mesa, and Miramar College). Gender and ethnicity information are also included as part of the necessary equity lens for viewing data and information of this type.

Methodology

Transfer Volume: Data for the transfer volume tables and figures came from the National Student Clearinghouse (NSC). One of the advantages to using NSC is that student transfer behavior can be tracked and identified at both the national and state levels. Data for students who attended one of the District's three colleges—City, Mesa, or Miramar—for both public and private institutions were sent to the NSC and matched against their transfer student database according to the first college a student attended in the SDCCD. NSC then returned the matched dataset to the District Office of Institutional Research and Planning (IRP). A student must have completed 12 or more transferrable units within 6 years prior to transferring to a 4-year institution. IRP put further parameters on the dataset and defined transfer volume as the total number of students who transferred to a 4-year institution and were enrolled at an SDCCD college at any time within six semesters prior to transferring (including stop outs).

Transfer Rate: Data for the transfer rate tables and figures came from the California Community Colleges Chancellor's Office Data on Demand system. These data are used in the Statewide Student Success Scorecard to calculate the Completion Rate. The data included three different cohorts whose outcomes (i.e., transfer to a 4-year institution, attain a certificate and/or associate degree, reach 'transfer prepared' status) were tracked for 6 years each. The cohorts consist of first-time students who completed six units in a 3 year period and who attempted any English or math course. To calculate the transfer rate, the number of students who successfully transferred to a 4-year institution were divided by the initial cohort and then multiplied by 100. One of the advantages to using the Data on Demand (DOD) system is that students can be tracked throughout the state's community college system.

Transfer Prepared Rate: Students who reach transfer prepared status, but do not transfer to a 4-year institution or obtain an associate degree are added to students who transfer to a 4-year institution to calculate the transfer prepared rate. Students are transfer prepared when they have successfully completed 60 UC/CSU transferable units with a GPA greater than or equal to 2.0. Transfer prepared data came from the California Community Colleges Chancellor's Office DOD system. The cohort parameters used to define transfer rate also apply to this definition of transfer prepared.

Note. Approximately 3% of the SDCCD submissions to the NSC are not reported due to students requesting their information be blocked from sharing with institutions other than their home institution in accordance with the Family Educational Rights and Privacy Act (FERPA) and institutions not participating in data sharing.

Findings and Conclusions

1) The top 4-year transfer institution was San Diego State University (SDSU) for all colleges from 2011-12 to 2015-16. Second was University of California, San Diego (UCSD) for Mesa and Miramar College and National University for City College. Transfer volume showed positive gains in a year-over-year comparison, with increases at City, Mesa, and Miramar Colleges (8%, 6% and 12%, respectively) between 2014-15 and 2015-16. Transfer volume Districtwide increased 7% from 3,416 in 2014-15 to 3,668 in 2015-16.

The remaining top three institutions varied slightly across all colleges in the District and each individual college, and varied slightly in rank by college. For instance, at City College, transfer volume to National University (2nd) and University of Phoenix (4th) ranked higher than at Mesa College (3rd & 7th ranking, respectively) and Miramar College (3rd & 5th ranking, respectively). City College was the only college to have three private institutions place into the top five transfer destinations for a fourth year in a row.

Transfer volume to CSU San Marcos showed an increase over the past five years (46%). This increase comes after a decline due to an enrollment management policy decision at CSU San Marcos due to budget reductions from the state. Students who live within the CSU San Marcos service area are given priority admission. Therefore, since the majority of SDCCD students do not live in the San Marcos service area, they are not given priority admission. Transfer volume declined in the years following this decision, with a recent 47% spike in transfers from 2014-15 to 2015-16.

Although transfer volume fluctuated from year to year, general trends indicated that the overall transfer volume to UCSD, National University, and University of Phoenix decreased (18%, 65%, 74%, respectively) between 2011-12 and 2015-16 for all SDCCD students, whereas transfer volume to SDSU and CSU San Marcos increased within the same time period (42% and 46%, respectively). This decrease in the top institutions reflects the overall decline in transfer volume for the same time period.

2) In regards to ethnicity, Latino students displayed the greatest increase in transfer volume (40%) over the last 5 years, from 745 in 2011-12 to 1,041 in 2015-16, while White students displayed the highest average transfer volume (41%). In a year-over-year comparison, transfer volume increased for Latino, Asian/Pacific Islander, and Filipino students for all colleges (13%, 13%, and 16%, respectively) from 2014-15 to 2015-16.

3) The average transfer rate for first-time students tracked over six years is 43%. The transfer rate has declined 7% from the 2008-09 cohort (47%) to the latest 2010-11 cohort (40%). This decline was consistent across all ethnic groups. The statewide transfer rate is 38% for the 2009-10 cohort using the transfer velocity query on the Chancellor's Datamart. It is important to note that different parameters are used to form the cohort using the transfer velocity tool compared to this report. One of the most notable differences is students in the transfer velocity cohort must attempt transfer level English or math. See this link for a detailed description of the cohort parameters. http://datamart.cccco.edu/Outcomes/Transfer_Velocity.aspx

4) On average, there were 353 students that qualified as transfer prepared. This report defines transfer prepared as those students who completed 60 UC/CSU transferable units, but did

not transfer or obtain a degree. This is consistent with the statewide definition. When the transfer rate is recalculated to include transfer prepared students the rate increases by approximately 6% points (47% to 52%).

5) Results for the top transfer destinations by ethnicity showed similar results to previous years. Overall, African American students were more likely to transfer to in-state private institutions (e.g., University of Phoenix, National University) relative to other ethnic groups when examining their respective top transfer destinations. The top 4-year transfer destination for Latino students was San Diego State University followed by National University and University of California, San Diego.

6) The five year analysis in this report shows a disproportionate increase to transfer volume in 2010-11, followed by softening the subsequent year, and stabilization from 2012-13 to 2014-15. Some of the fluctuation can be explained by changes in budget and class size at the four-year institutions, coupled with decline in prior year enrollments at the colleges. Other explanations will need to be examined from an internal perspective in order to gain a fuller understanding as to why transfers have declined. The campus-based researchers will work together with the college constituents to discuss college practices, policies, programs, and services that impact transfer pathways, and ways in which to improve these.

Transfer Volume

Transfer volume showed positive gains in a year-over-year comparison. There were one year increases at City, Mesa, and Miramar Colleges between 2014-15 and 2015-16 (8%, 6%, and 12%, respectively). Transfer volume Districtwide increased 7% from 3,416 in 2014-15 to 3,668 in 2015-16.

Transfer volume has increased 4% Districtwide between 2011-12 and 2015-16. During the same time period Mesa and Miramar Colleges both showed increases in transfer volume (12% and 9%, respectively), while City College showed a 14% decrease.

Figure 1. Overall Transfer Volume for All Colleges and by College 2011-12 to 2015-16

Table 1. Overall Transfer Volume for All Colleges and by College

	2011-12	2012-13	2013-14	2014-15	2015-16	% Change 11/12-15/16	% Change 14/15-15/16

All Colleges	3,516	3,428	3,334	3,416	3,668	4%	7%

Source: National Student Clearinghouse

Transfer Volume by Demographics

Transfer volume among ethnicities is somewhat representative of the student population that SDCCD serves, with the exception of Latino and White student transfers. In particular, the Latino student five-year transfer volume average (25%) is below the districtwide Latino student population average (34%; SDCCD Fact Book 2016). Furthermore, the White student five-year transfer volume average (41%) is above the districtwide White student population average (32%; SDCCD Fact Book 2016). It is important to note that this gap has narrowed over the last six years, with Latino student transfers increasing an average of 2% each year since 2010-11.

In regard to gender, of those who transferred from all colleges in the District between 2011-12 and 2015-16, on average, 51% were female students and 49% were male students. In a year-over-year comparison, transfer volume for female students increased 10% from 1,706 in 2014-15 to 1,875 in 2015-16, while transfer volume for male students increased 5% from 1,708 to 1,793 in the same time period.

Transfer Volume: Top Transfer Institutions

The top 4-year transfer institution was San Diego State University (SDSU) for all colleges from 2011-12 to 2015-16. Second was University of California, San Diego (UCSD) for Mesa and Miramar Colleges and National University for City College. In the last five years, overall transfer volume has increased 42% at SDSU from 2011-12 to 2015-16 (see Table 4). This is likely due to an augmentation in state funding that allowed SDSU to open up a spring admission cycle starting in 2011, whereas in previous years admission had been restricted to fall terms.

There was a decline in the total number of transfers to UCSD over the past five years (18%) due in part to rising admission standards and impaction at UCSD. Additionally, in 2012, a policy change was made by the UCs allowing students to only use TAG (Transfer Admission Guarantee) admittance for one campus. This resulted in a large decrease in the number of TAG applications, particularly from the local region. In 2014, UCSD eliminated the TAG program with local community colleges (Flynn, 2012). Despite these changes, UCSD transfer volume has remained relatively flat in a year-over year comparison with a 3% decrease for all colleges from 325 in 2014-15 to 316 in 2015-16.

Transfer Volume: Top Transfer Destinations by Ethnicity

The top 4-year transfer destination was San Diego State University (SDSU) among all ethnic groups within all colleges in the District over the past 5 years. The second top 4-year destination was the University of California, San Diego (UCSD) among most of the ethnic groups, with the exception of African American, Filipino and Latino students. For African American, Filipino and Latino students, the second top 4-year institution was National University. The remaining top 4-year institutions varied somewhat in name and rank across each ethnic group.

Transfer Rate

The cohorts for transfer rate include first-time students who attempted any English or math course. Transfer volume includes all students (first-time, transfer, etc.) regardless of which courses were taken. Students initially taking courses at another institution would not be included in the transfer rate, but would be included in transfer volume.

Overall, the 2008-09 cohort has the highest transfer rate (47%) for the three colleges. The transfer rate for each college decreased from the first cohort in 2008-09 to the third cohort in 2010-11. The decline in transfer rates in the 2009-10 cohort is likely due to a reduction in the number of sections offered and the elimination of summer courses in 2010, 2011, and 2012 due to budget reductions from the state.

Figure 6. Overall Transfer Rate by College

Table 14. Overall Transfer Rate by College

	Cohort									College Average 2008-09 to 2010-11

Transfer Rate by Ethnicity

The ethnic groups for all three colleges with the highest overall transfer rates were Asian/Pacific Islander and Filipino (55% and 52%, respectively). This transfer rate pattern in Asian/Pacific Islanders is similar to the success and persistence rates for the three colleges except that White students have similar average success and retention rates to Asian/Pacific Islanders (SDCCD Fact Book, 2016), but are only third in transfer rates.

The ethnic groups with the lowest college average transfer rates were African American (31%), Latino (36%) and American Indian (42%). The success and retention rates of African American, American Indian, and Latino students have also been the lowest from 2011-12 to 2015-16 compared to the other ethnic groups (SDCCD Fact Book, 2016). This may partially explain the low transfer rates of these groups.

Table 15. All Colleges Overall Transfer Rate by Ethnicity

Transfer Rate by Gender

Overall, the transfer rates for females (44%) are higher than males (41%) for all three colleges. The three individual colleges follow this transfer rate pattern in gender with City College having the largest gap between females and males (females 44%; males 39%, on average).

Table 19. All Colleges Overall Transfer Rate by Gender

Transfer Prepared Rate

This section of the report includes overall transfer rate with the addition of transfer prepared rates. Students who completed 60 UC/CSU transferable units, but did not transfer or obtain an associate degree are considered transfer prepared.

Even with the addition of transfer prepared students the transfer rate for the three colleges declined from 2008-09 to 2009-10. The combined transfer rate for City College/ECC decreased from the first cohort in 2008-09 (53%) to the final cohort 2010-11 (41%). The combined transfer rate for Mesa College also decreased from the first cohort in 2008-09 (55%) to the final cohort 2010-11 (51%). The transfer rate at Miramar College increased from the first cohort 2008-09 (45%) to the final cohort in 2010-11 (46%). On average, the transfer rate would have increased by an additional 6% points when transfer prepared students were added.
