

# PPE SAFETY

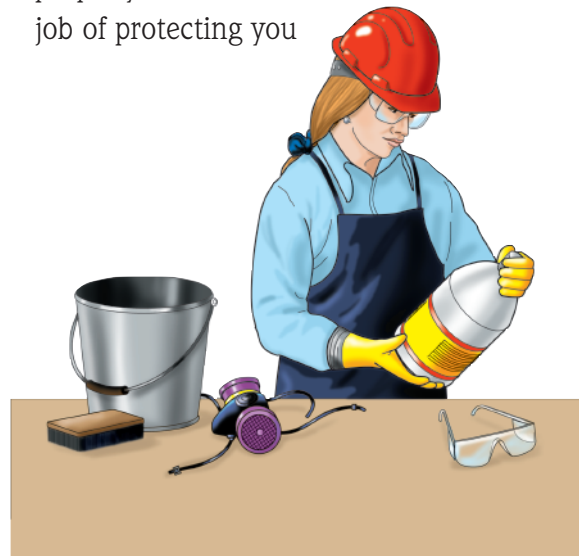

## Personal Protective Equipment (PPE) is meant to protect YOU!

It acts like a barrier between you and workplace hazards like dangerous chemicals, machines, and processes.

## Stay Safe with PPE

- ✓ **Know the hazards** you face, and which protective equipment you should use
- ✓ **Use the equipment** you've been instructed to use
- ✓ **Check the equipment** for damage before each use
- ✓ **Be sure you get a good fit** each time you wear PPE
- ✓ **Store and maintain your equipment** properly so it can do its job of protecting you

**Remember—your PPE can't protect you if you're not wearing it!**
